The pathophysiology of sepsis is the result of a dysregulated host response to infection. Interactions between conserved pathogenic signals and host recognition systems initiate a systemic reaction to local infection. Pro- and anti-inflammatory intermediates and associated coagulatory abnormalities lead to altered macrovascular, microvascular, and mitochondrial function.

[Chapter 2: The animal body](#)

{The circulatory system is the

heart and blood vessels that pump and transport blood throughout the body. {The lungs and other breathing organs make up the respiratory system. They work to exchange oxygen for carbon dioxide in the blood. {The stomach, liver, intestines, gallbladder, and esophagus are all food-processing organs of the digestive ...

Pneumonia is an inflammatory condition of the lung primarily affecting the small air sacs known as alveoli. Symptoms typically include some

combination of productive or dry cough, chest pain, fever and difficulty breathing. The severity of the condition is variable. Pneumonia is usually caused by infection with viruses or bacteria, and less commonly by other microorganisms.
