WHAT IS A DIFFERENTIAL EQUATION? solution
is $z = 27 + Cx - 7$ so the original equation has the solution $y = 27x + Cx - 6$. (h) Divide by x : $y' = \sqrt{1 + y^2/x^2}$, then substitute $z = y/x$ to obtain the separable equation $xz' + z = \sqrt{1 + z^2}$. The solution is $z^2 + z\sqrt{1 + z^2} + \ln(z + \sqrt{1 + z^2}) = 2 \ln x + C$. The solution to the original equation can be

I'm studying differential equations (specifically Laplace Transforms) right now with my college assigned 'Differential Equations with Application and Historical Notes'-George F Simmons. My first course in differential equations was a failure. It may have been my fault, of course. I did learn how to solve linear differential equations, and I remember the endless proof of existence and uniqueness of solutions, particularly the theorem that explained how the local solutions could be assembled into a solution that was valid in as large a region as possible.

Sturm–Liouville theory is a theory of a special type of second order linear ordinary differential equation. Their solutions are based on eigenvalues and corresponding eigenfunctions of linear operators defined via second-order homogeneous linear equations. The problems are identified as Sturm-Liouville Problems (SLP) and are named after J.C.F. Sturm and J. Liouville, who studied them in the ...
