Presently, most textbooks, introduce geometric spaces from linear algebra, and geometry is often presented, at elementary level, as a subfield of linear algebra. Usage and applications. Linear algebra is used in almost all areas of mathematics, thus making it relevant in almost all scientific domains that use mathematics.

[Linear Algebra in Twenty Five Lectures](#)

In linear algebra, a minor
of a matrix A is the
determinant of some smaller
square matrix, cut down from
 A by removing one or more of
its rows and columns. Minors
obtained by removing just
one row and one column from
square matrices (first
minors) are required for

of that text; the tenth chapter consists of twenty applications of linear algebra drawn from business, economics, engineering, physics, computer science, approximation theory, ecology, demography, and genetics. The applications are largely independent of each other, and each includes a list of mathematical prerequisites. Thus, each instructor has
