Kinds and units of measurement. Both gas and liquid flow can be measured in physical quantities of kind volumetric or mass flow rates, with units such as liters per second or kilograms per second, respectively. These measurements are related by the material's density.The density of a liquid is almost independent of conditions.

Orifice plate meter is the most popular type of obstruction flow meter devices, due to its simplicity, low maintenance required, and long life time. This type uses differential pressure technique to measure the flow rate of fluids, which require accurate calculation of the orifice sizing at converting the flow rate into differential pressure.
